Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Examiner understands the TFCI to comprise both the TFCI1 and TFCI2 and that both the TFCI1 and TFCI2 are transmitted on the DPCH. Examiner also understands the TFCI1 corresponds to the DPCH and the TFCI2 corresponds to the DSCH. Examiner believes that the power offset P0 for the TFCI in Toskala will adjust the power for TFCI1 and TFCI based on said above reasoning or understanding. Examiner, however, does agree with Applicants that the Toskala reference does not teach controlling the transmission power of the TFCI using a power offset based on determining whether the primary base station exists among the selected at least one base station. Examiner also agrees with Applicants that Toskala does not teach measuring a second SIR using TFCI signals in the DPCCH; and independently controlling a transmission power of the DCH and the TFCI for the DSCH based on the measured first and second SIRs. Examiner stated that an argument based on the reasoning above would be made for maintaining the rejection of Claim 39. Examiner requested the Applicants to explain why said above reasoning is incorrect.
